

SPECIFICATIONS

CHEM M250 RAPID

Is a special hydraulic binder, which, when mixed with clean aggregates and water, has the properties to harden in a few hours and to dry perfectly at whatever thickness within 24 hours. Because of these characteristics and the very high mechanical strength, Chem M250 Rapid is the ideal binder for screeds onto which resilient, textile, wood, ceramic or stone floorings must be installed within 24 hours.

TECHNICAL DATA

Product identity

Consistency: fine powder
Color: grey
Bulk density (kg/m³): 1,600
Dry solids content (%): 100
Standard: EN 1381
