### CHEM M250

Is a special hydraulic binder, which, when mixed with clean aggregates and water, has the properties to harden in a few hours and to dry perfectly at whatever thickness within 24 hours. Because of these characteristics and the very high mechanical strength, Chem M250 is the ideal binder for screeds onto which resilient, textile, wood, ceramic or stone floorings must be installed within 24 hours.

#### TECHNICAL DATA

##### Product identity

Consistency: fine powder  
Color: grey  
Bulk density (kg/m<sup>3</sup>): 1,600  
Dry solids content (%): 100  
Standard: EN 1
