

SPECIFICATIONS

EPO FLOOR INDUSTRIAL

Is a self-leveling, two-component epoxy resin-based smoothing and leveling compound. By carefully mixing the two components, an easy-to-apply, self-leveling paste is obtained, which may be used to form a beige-colored deformable surface with high mechanical strength, and which is perfectly flat and non-absorbent. Epo Floor Industrial may be applied at any thickness to even out highly-irregular surfaces on the substrate. Floor coverings may be laid on Epo Floor Industrial approximately 16 hours after applying the product.

TECHNICAL DATA

Product identity

COMPONENT A

| | |
|-------------------------|-----------------------|
| Consistency of the mix: | liquid |
| Color: | beige |
| Density: | 1.7 g/cm ³ |
| Brookfield viscosity: | 6,800 mPa·s ± 200 |
| Dry solids content: | 100% |

COMPONENT B

| | |
|-----------------------|-----------------------|
| Consistency: | liquid |
| Color: | brown |
| Density: | 1.2 g/cm ³ |
| Brookfield viscosity: | 30 mPa·s ± 5 |
| Dry solids content: | 100% |
