

SPECIFICATIONS

MONOSEAL

Is a one-component, waterproofing membrane based on cementitious binders, selected fine-grained inert materials and special highly-flexible acrylic polymer additives. When mixed with water, it forms an slurry with excellent workability which is easy to apply with a trowel, roller or brush, and which may also be applied on vertical surfaces without slumping. Monoseal bonds extremely well to all surfaces in concrete, masonry, ceramic and marble, if they are mechanically stable and clean.

TECHNICAL DATA

Product identity

Consistency: powder
Color: grey
Bulk density (kg/m³): 1250
Dry solids content (%): 100
Classification Standard: EN 1504-2 and EN 14891
