### PLASTERY MORTAR M5

Is a light gray single-component premixed mortar based on hydrated lime, hydraulic binders, selected sands and special powder additives. Thanks to its particular composition, the plaster obtained by mixing Plaster Mortar M5 with water has a good quality adhesion and is particularly suitable for application with plastering machine on almost all substrates. Plaster Mortar M5 is classified according to the European standard EN 998-1 as GP "General purpose mortar for plasters internal / external" category CS II.

#### TECHNICAL DATA

##### Product identity

Consistency: powder

Color: grey

Maximum size of aggregate (EN 1015-1) (mm): 1.5

Bulk density (kg/m<sup>3</sup>): 1,500

Chloride content (EN 1015-17) (%): < 0.05
